

**2015**

# **INSTITUTE OF ENGINEERING & MANAGEMENT**

## **PHOTO GALLERY**

VERSION 1.0

**Presented By**

**Manish Kumar Gupta**

**Under guidance of :**

**IEM INDUSTRIAL TRAINING**

# ACKNOWLEDGEMENT

---

I present herewith pride & pleasure the work of “**Photo Gallery**” with the help of ‘**ASP DOT NET**’ aimed to supplement the scholastic attainment as required under the regulation of West Bengal University of Technology (WBUT).

Life of human being is full of interaction. No one is a self-sufficient by himself. In our daily life we go ahead by acquiring something from each other. Whenever anyone is doing serious and important work, where a lot of help and guidance from many people concerned is required, one feels obliged to them. The guidance and cooperation during the project work has left a long impression in our mind and while giving the final shape to our project report. I would like to take a minute to acknowledge those who made this project possible for me.

**IEM Industrial Tanning from College**, without his timely co-operation and valuable guidance the completion of this project would have been a difficult task.

All faculty members of CSE department who provide their valuable suggestion & knowledge regarding the project.

# ABSTRACT

---

This project is all about an online registration system of the customers who visit this webpage. So here any customer can login if they create an account here & they can also check out different aspects.

If they are interested, then they can fill-in the provided form & get registered.

# CHAPTER: I

# 01. INTRODUCTION

---

The main purpose of a photo gallery is to link other web sites by categorizing them into different sections. Sort of like an online filing cabinet, but the sites do not necessarily have to be in alphabetical order, but majority of web directories have their categories and topics in alphabetical order, but it is not a must.

The software is for online registration of any customer.

For example, if you're performing an online search for some species, you would search under the wildlife link or tab, depending on the site. If you interested to view some special photo like nature, places etc you can select different category according to your choice. Photo Gallery are there to help you online, they are basically a helping aide or a tool to help you find your way online for some special picture captured by special talented photographer.

## 02.OBJECTIVES

---

In our modern era of organization of web development it is very important to keep the data and image into an organized manner so that when required it could be fetched out from the location. This organization of data is done by using various ways.

In this project the goal is to development an efficient and user friendly basic website to take different category images to save and retrieve when required.

The overall scope of this project is to develop a basic website which is better or effective as per as complexity and also user friendly.

## 03.ABOUT THE PROJECT

---

This Project has been created by the student of **4<sup>th</sup> Year B.Tech in Computer Science & Engineering** as a part of my final year summer training project.

This project has been created by **Manish Kumar Gupta** working under guidance of **IEM Industrial Training Group** in college on **Photo Gallery** website.

My aim is to study and understand the different technology and aspect of ASP DOT NET. The overall objective is to understand and make a photo gallery website.

## **(A) PROJECT IN BRIEF**

---

There will be some major components:

- Viewer registration process.
- Viewer login process.

Proposed system provides with following solutions to the manual process:

- It provides better and efficient service.
- Reduce the workload of the stuffs.
- Provide facility for proper monitoring, reduce paper works & provide data security.

## **(B) PROJECT IN DETAIL**

---

**Area:-** Online Photo Viewer

**Software Name:-** Photo Gallery

**Responsibility:-** Project development, testing and Implementation

**Front End:-** ASP DOT NET.

**Back End:-** Microsoft SqlServer.

**Project type:-** Web Based Project.

**Under By :-** IEM Industrial Training Group

## 04. FEASIBILITY ANALYSIS

---

Whatever we think need not be feasible. It is wise to think about the feasibility of any problem we undertake. Feasibility is the study of impact, which happens in the organization by the development of a system. The impact can be either positive or negative. When the positive dominates the negatives then the system is considered is feasible. Here the feasible study can be performed in two ways such as Technical Feasibility and Economical Feasibility.

### **(A) TECHNICAL FEASIBILITY**

We can strongly say that it is technically feasible, since there will not be much difficulty in getting required resources for the development and maintaining the system as well. All the resources needed for the development of the software as well as the same is available in the organization itself.

### **(B) ECONOMICAL FEASIBILITY**

Development of this application is highly economically feasible. The organization needed not spend much money for the development of the system already available. The only thing is to be done is making an environment for the development with an effective supervision. If we are doing so, we can attain the maximum usability of the corresponding resources. Even after the development, the organization will not be in a condition to invest more in the organization. Therefore, the system is economically feasible.

# CHAPTER: II

## 05. SYSTEM IMPLEMENTATION

---

The systems implementation is a process of construction and delivery phases of the life cycle. Systems implementation is the construction of the new system and the delivery of that system into production.

### **STAGES OF IMPLEMENTATION AREA**

- I. Analysis of the project
- II. GUI Design
- III. Coding (Individual testing method)
- IV. Database Design.
- V. Testing
- VI. System testing
- VII. System maintenance.

## 06. PLATFORM USE

---

### **(A) HARDWARE USE**

- Processor ( Intel, AMD minimum 1 GHz speed )
- Hard Disk (minimum 7 GB free space)
- RAM ( 512 MB or more )
- Video memory( minimum 16MB )
- Keyboard

### **(B) SOFTWARE USE**

- Operating System – Windows 7 or higher version.
- Visual Studio 2012.

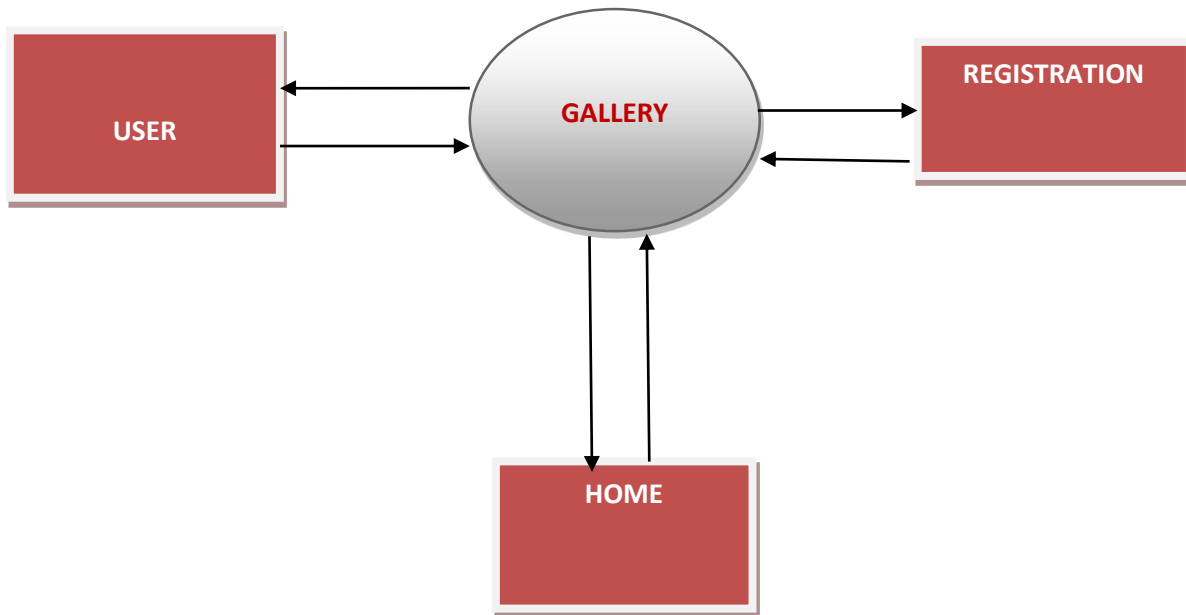

# CHAPTER: III

# 10. SCREEN SHORTS

## (A) REGISTER PAGE

The screenshot shows a web browser window with the title 'SignUP' and the address bar displaying 'localhost:51993/register.aspx'. The page has a black header with the text 'PhotoGallery' in red. The main content area is divided into two sections. The left section is empty. The right section contains a 'Sign UP' form with the following fields: First Name (Manish), Last Name (Kumar Gupta), UserName (gupta.manish414), Password (masked with asterisks), Mobile (9883925313), and DOB (25/4/1992). A green 'Submit' button is located below the form. Below the form, there is a link that says 'Already Have an account. LogIn Here..'. The Windows taskbar is visible at the bottom of the browser window, showing various application icons and the system clock indicating 10:20 on 26-11-2015.

# CHAPTER: VI

# 1 1. CONCLUSION

---

## **(A) FURTHER SCOPE**

As many large projects have some limitations my. The project might not met all the requirements of a real life application. But it could be further developed to increase its efficiency and variations.

## **(B) SYSTEM TESTING & MAINTENANCE**

As we all of known that software testing according to industry cannot be properly done in the student's projects. But in spite of that factor I try to maintain the testing methodology in our project according to the software engineering aspects.

The entire project has been tested successfully by myself and our faculty member acting upon all the software engineering testing methodology.

Maintenance is such type of activity which much depends on the customer feedback. As our project is GUI (GRAPHICAL USER INTERFACE).If there are any difficulties or problems found in further in my project, I would be fully responsible and bound to be maintain the software at any time of customer reference.

## **(C)ENHANCEMENT SCOPE**

The project might not met all the requirements of a real life application. But it could be further developed to increase its efficiency and variations. There is a scope to develop our project in future and increase its efficiency.

In our project Digit sort is proposed. It has complexity more than some earlier proposed algorithms, but we try to decrease its complexity. It has a special situation when its complexity will decrease with other sorting algorithm that is we try to focus in our project.

Further we try to develop a sorting algorithm that is better or effective as per as complexity concern and maintain the digit sort also.

# CONCLUSION

---

From a proper analysis of positive points and constraints on the components, it can be safely concluded that the product is a highly efficient GUI based component. This application is working properly and meeting to all user requirements. This component can be easily plugged in many other systems.
